Reading: chapter 1

# Chapter 1.1: Runtime Complexity

The term analysis of algorithms is used to describe approaches to study the performance of computer programs. We interested to find a runtime complexity of a particular algorithm as a function of  $T(n)$  that describes a relation between algorithm's execution time and the input size  $n$ .

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

$$\lim_{n \rightarrow \infty} T(n)$$

CPU: 64 bits

$2+2 \rightarrow O(1)$  const.

$O(n)$  linear

# Runtime Complexity

In this course we will perform the following types of analysis:

- the worst case complexity
- the best case complexity
- the average case complexity
- the amortized time complexity

lecture 2

We measure the run time of an algorithm using following asymptotic notations:  $O$ ,  $\Omega$ ,  $\Theta$ .

upper bound

lower bound

[L, U]

$O$   
 $\Omega$

# Big-O (upper bound)

For any monotonic functions  $f, g$  from the positive integers to the positive integers, we say

~~Assignment Project Exam Help~~

if

~~<https://powcoder.com>~~  
 $g(n)$  eventually dominates  $f(n)$

~~Add WeChat powcoder~~  
Formally: there exists a constant  $c$  such that for all sufficiently large  $n$ :  $f(n) \leq c \cdot g(n)$

$$\begin{aligned} \underline{O(1)} &\leq O(\log n) \leq \underline{O(n)} \leq \\ &\leq O(n \log n) \leq O(n^2) \leq \\ &\leq \dots \leq O(n!) \end{aligned}$$

$\log_2$

# Discussion Problem 1

Arrange the following functions in increasing order of growth rate with  $g(n)$  following  $f(n)$  in your list if and only if  $f(n) = O(g(n))$ ,  $n \rightarrow \infty$

(5)  $\log n^n$ , (7)  $n^2$ , (8)  $n^{\log n}$ , (1)  $n \log \log n$ , (3)  $n^{1/\log n}$ , (2)  $2^{\log n}$ , (4)  $\log^2 n$ , (6)  $n^{\sqrt{2}}$

<https://powcoder.com>

Add WeChat powcoder

$$\log_b a = \frac{\log a}{\log b}$$

$$\frac{1}{\log n} = \frac{\log_2 2}{\log_2 n} = \log_n 2$$

# Discussion Problem 2

Suppose that  $f(n)$  and  $g(n)$  are two positive non-decreasing functions such that  $f(n) = O(g(n))$ .

Is it true that  $2^{f(n)} = O(2^{g(n)})$ ? FALSE

if it's true then prove it  
if it's false, then provide an example

<https://powcoder.com>

Add WeChat powcoder

$$f(n) = 2n, \quad g(n) = n, \quad 2n = O(n)$$
$$2^{f(n)} = 4^n, \quad 2^{g(n)} = 2^n$$

$$\frac{4^n}{2^n} = 2^n$$

$$4^n \neq O(2^n) \quad \text{is it true?}$$

NO

# Omega: $\Omega$ (lower bound)

For any monotonic functions  $f, g$  from the positive integers to the positive integers, we say

$f(n) = \Omega(g(n))$  Assignment Project Exam Help

if:

<https://powcoder.com>  
 $f(n)$  eventually dominates  $g(n)$

Add WeChat powcoder

Formally: there exists a constant  $c$  such that for all sufficiently large  $n$ :  $f(n) \geq c \cdot g(n)$  Definition

$$4^n = \Omega(2^n) = \Omega(n)$$

# Discussion Problem 3

Suppose that  $f(n)$  and  $g(n)$  are two positive non-decreasing functions such that  $f(n) = \Omega(g(n))$ .

Is it true that  $2^{f(n)} = \Omega(2^{g(n)})$ ?

$f(n) = n$ ,  $g(n) = 2n$ ,  $n = \Omega(2n)$

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

$$2^{f(n)} = 2^n$$

$$2^{g(n)} = 4^n$$

$$2^n \neq \Omega(4^n)$$

is it true?

FALSE

# Theta: $\Theta$

For any monotonic functions  $f, g$  from the positive integers to the positive integers, we say

Assignment Project Exam Help

$$f(n) = \Theta(g(n))$$

$$c_2 g(n) \leq f(n) \leq c_1 g(n)$$

if:

<https://powcoder.com>

$$f(n) = O(g(n)) \text{ and } f(n) = \Omega(g(n))$$

Add WeChat powcoder

In this class we will be mostly concerned with a **big-O** notation.

$$T(n) \in [L, U]$$

$$L = U$$

# Quickies

1.  $n \stackrel{\geq}{=} \Omega(n^2)$  ? ~~F~~

2.  $n = \Theta(n + \log n)$  ? ~~T~~

3.  $\log n = \Omega(n)$  ? ~~F~~

4.  $n^2 = \Omega(n \log n)$  ? ~~T~~

5.  $n^2 \log n = \Theta(n^2)$  ? ~~F~~

6.  $3n^2 + 4n + 5 = \Theta(n^2)$  ? ~~T~~

7.  $2^n + 100n^2 + n^{100} = \Omega(n^{101})$  ? ~~T~~

8.  $(1/3)^n + 100 \stackrel{\rightarrow 0}{=} \Theta(1)$  ? ~~T~~  $\lim_{n \rightarrow \infty}$

Add WeChat powcoder

lim bigOh3(n)

~~$O(n^2)$~~

linear in the input size

size of str in n?

$\text{bigOh3}(0) = a$   
 $\text{bigOh3}(1) = aa$   
 $\text{bigOh3}(2) = aaaa$   
 $\text{bigOh3}(3) = aaaaaa$

upper bound  
 $O(n \cdot 2^n)$

$1 + 2 + 4 + \dots + 2^n = 2^{n+1} - 1$   
 $\approx O(2^n)$

# Chapter 1.3: Trees and Graphs

A **graph**  $G$  is a pair  $(V, E)$  where  $V$  is a set of vertices (or nodes)  $E$  is a set of edges connecting the vertices.

An undirected graph is **connected** when there is a path between every pair of vertices.

A **tree** is a connected graph with no cycles.

A **path** in a graph is a sequence of distinct vertices.

A **cycle** is a path that starts and ends at the same vertex.

We start with reviewing mathematical proofs (induction and contradiction).

**Theorem.** Let  $G$  be a graph with  $V$  vertices and  $E$  edges. The following statements are equivalent:

1.  $G$  is a tree (a connected graph with no cycles).
2. Every two vertices of  $G$  are connected by a unique path.

Assignment Project Exam Help

3.  $G$  is connected and  $V = E + 1$ .

4.  $G$  is acyclic and  $V = E + 1$ .

5.  $G$  is acyclic and if any two non-adjacent vertices are joined by an edge, the resulting graph has exactly one cycle.

$1 \rightarrow 2$ : Given 1, prove 2

Prove that a path is unique.

Proof by contradiction.

Assume that a path is NOT unique.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

$P_1 + P_2$  is a cycle

Contradiction.

2  $\rightarrow$  3: Given 2, Prove  $V = E + 1$   
 Proof by induction on vertices

1. Base case.  $V = 2$    $V = E + 1$

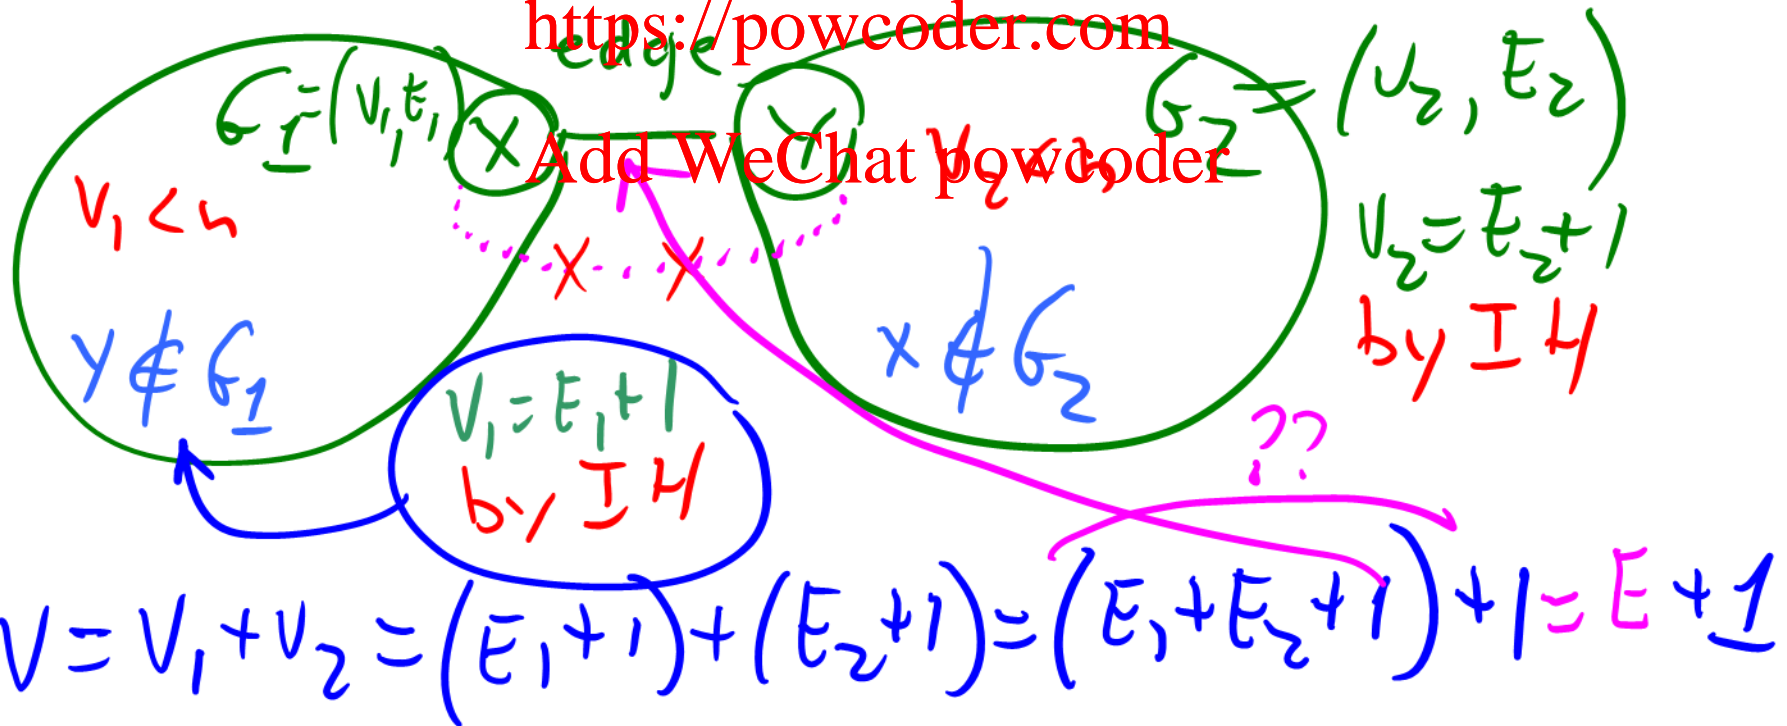

2. IH: Assume  $V = E + 1$  for graphs  $V < n$ .

Assignment Project Exam Help

3. IS: Prove  $V = E + 1$  for graphs  $V = n$ .

<https://powcoder.com>

Add WeChat powcoder

**Theorem.** Prove that in an undirected simple graph  $G = (V, E)$ , there are at most  $V(V-1)/2$  edges. In short, using the asymptotic notation,  $E = O(V^2)$ .

Proof.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

at most  
one edge

$$E = (V-1) + (V-2) + (V-3) + \dots + 1 = \frac{V(V-1)}{2} = O(V^2)$$

Sparse:  $E \sim V$

Dense:  $E \sim V^2$

# Representing Graphs

Adjacency List *sparse*

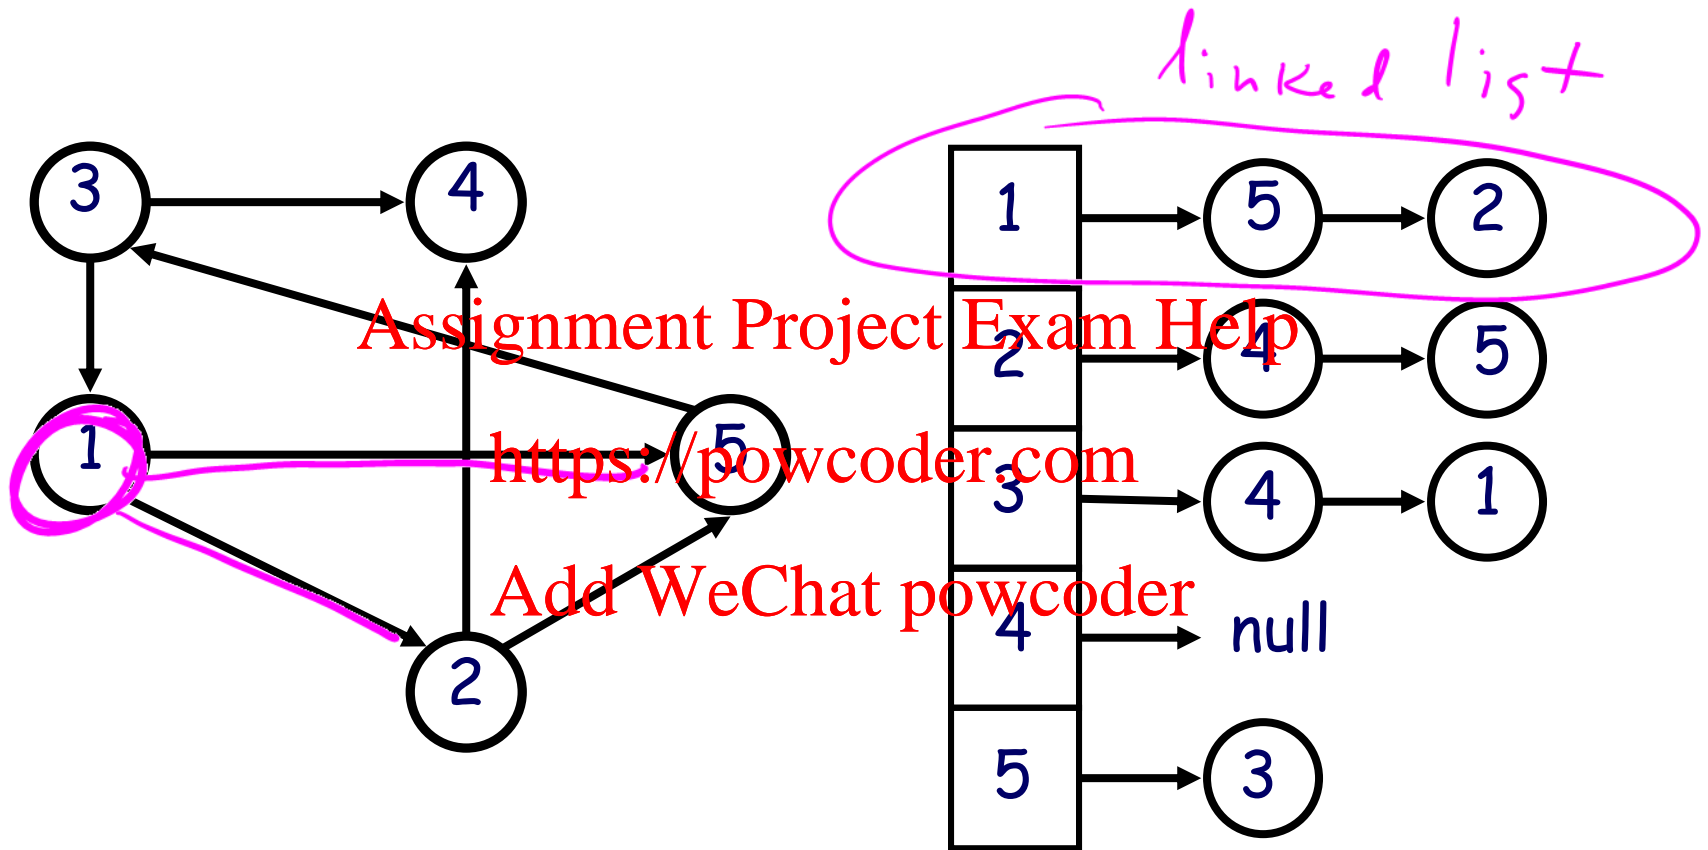

Assignment Project Exam Help

Adjacency Matrix *dense*  
<https://powcoder.com>

Vertex  $X$  is adjacent to vertex  $Y$  if and only if there is an edge  $(X, Y)$  between them.

# Adjacency List Representation

Is vertex 1 adjacent to 3?

It takes linear time to figure it out.

# Adjacency Matrix Representation

Is vertex 1 adjacent to 3?

It takes constant time to figure it out.

# Representing Graphs

Adjacency List Representation is used for representation of the sparse ( $E = O(V)$ ) graphs.

Adjacency Matrix Representation is used for representation of the dense ( $E = \Omega(V^2)$ ) graphs.

<https://powcoder.com>

Is the Facebook social graph sparse or dense?

Add WeChat powcoder

sparse

We can say a connected graph is maximally sparse if it is a tree.

We can say a graph is maximally dense if it is complete.

# Graph Traversals

visit All vertices

Depth-First-Search (DFS)

Breadth-First-Search (BFS)

Assignment Project Exam Help

DFS uses a stack for backtracking.  
BFS uses a queue for bookkeeping.
